

***EnSolv*[®] CC-A Vapour degreasing solvent for precision metal cleaning**

The ***EnSolv*[®] CC-A** formulation for precision metal cleaning responds to the need for high performance vapour degreasing solvents for critical cleaning in general engineering, aerospace, medical optical and electrical industries.

***EnSolv*[®] CC-A** removes cutting oils, lubricants, lapping compounds grinding pastes and water based cutting oils or fluids. This complex synergistic blend utilises environmentally compliant solvents combined with selected surfactants to remove oils and lubricants to the highest standards for critical cleaning applications and releases and suspends inorganic solids and soils such as fingerprints, polishing compounds and grinding paste from finely finished and highly polished surfaces such as stainless steel and plated parts, optical lenses and components for medical appliances.

***EnSolv*[®] CC-A** is a proprietary blend of inhibitors and stabilisers for the solvents to prevent water staining and corrosion of yellow metals such as copper, brass and bronze which can be a problem with some other solvents.

***EnSolv*[®] CC-A** is non-flammable, stable and specifically formulated for use in any vapour degreasing equipment with the added advantage of lower solvent usage, greater stability and reduced costs. The formulation is compliant with all current environmental and user safety legislation.

EnSolv[®] CC-A Benefits

Designed for vapour degreasing
Removes oil, grease and soils fast
Simple drop-in replacement for n-propyl bromide and trichloroethylene
Low surface tension
Reduced costs
Compatible with all metals
User friendly
Increased production
Faster cleaning cycles
Components easily handled after cleaning
Safe for the environment

Talk to us about whether **EnSolv CC-A** is the best choice for your application. Advice, literature, changeover instructions are all available to make the change quickly, easily and at no extra cost of usage.

FURTHER INFORMATION
